#### **DETAILED ACTION**

## Response to Arguments

- 1. Applicant's arguments filed 10/8/02 have been fully considered but they are not persuasive.
- 2. In response to Applicant's arguments that US 5,503,141 to Kettl fails to teach a mouthpiece, it should be noted that the housing that surrounds the microphone capsule is consistent with the structure of the mouthpiece as claimed.

## Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 18 recites the limitation "said tubular month-piece" in line 1. There is insufficient antecedent basis for this limitation in the claim.

# Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

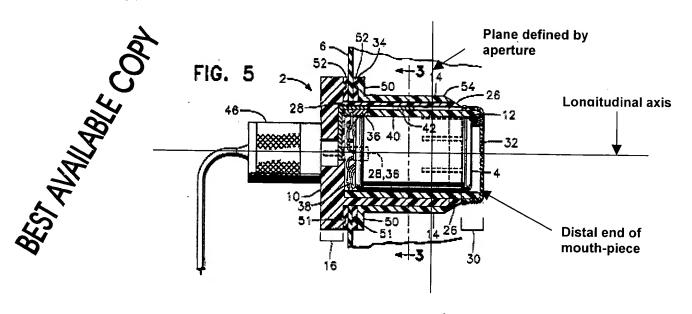

Art Unit: 3761

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 7. Claims 10-12, 14, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5,503,141 to Kettl et al.
- 8. **As to claim 17**, Kettl teaches an oxygen breathing mask with a sound pick-up device comprising a flexible cap **6**; a first microphone capsule **4**; a tubular mouth-piece **12** mounted in front of the first microphone capsule with the microphone capsule positioned between the flexible cap and the mouth-piece, the mouthpiece having a distal end away from the microphone capsule and defining an aperture, the mouthpiece having a longitudinal axis passing substantially through a center of a location at which a user's mouth is adapted to be positioned in the mask, and the aperture defining a plane which is substantially perpendicular to said longitudinal axis.

Kettl fails to specifically teach an exhalation port positioned below the microphone capsule. However, Kettle teaches a respiratory tube located below the microphone capsule (see Fig. 1) and it is known in the art to have a respiratory tube having both inspiratory and expiratory ports. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have an expiratory port located below the microphone capsule because it is known in the art to have a respiratory tube having both inspiratory and expiratory ports.

Art Unit: 3761

As to claim 10, Kettl discloses a circular aperture of the mouth-piece.
 Kettl does not disclose expressly an elliptical aperture of the mouth-piece.

At the time the invention was made, it would have been an obvious matter of design choice to a person of ordinary skill in the art to use an elliptical aperture because Applicant has not disclosed that an elliptical aperture provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have expected Applicant's invention to perform equally well with either the circular aperture of Kettl or the claimed elliptical aperture because both type of aperture perform the same function.

Therefore, it would have been obvious matter of design choice to modify Kettl to obtain the invention as specified in claim 10.

10. **As to claims 11**, Kettl discloses an acoustic screen **32** positioned in the aperture.

Art Unit: 3761

As to claim 12, Kettl discloses a cloth screen positioned in the aperture.
 Kettl does not disclose expressly a metal lattice screen.

At the time the invention was made, it would have been an obvious matter of design choice to a person of ordinary skill in the art to use a metal lattice screen because Applicant has not disclosed how the metal lattice screen provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have expected Applicant's invention to perform equally well with either the cloth screen of Kettl or the claimed metal lattice screen because both screens perform the same function.

Therefore, it would have been obvious matter of design choice to modify Kettl to obtain the invention as specified in claim 12.

- 12. **As to claim 14**, Kettl teaches a cable connected to the microphone capsule.
- 13. **As to claim 16**, Kettl discloses the claimed invention except for the mask further comprising a second microphone capsule. It would have been obvious to one of ordinary skill in the art at the time the invention was made to add a second microphone capsule, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.
- 14. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kettl and in view of US 4,961,420 to Cappa et al.

Art Unit: 3761

15. **As to claim 13**, Kettl teaches all the limitations of the claims except for a mask further comprising a baffle fixedly joined to the flexible cap and positioned between the microphone capsule and the exhalation port.

Cappa teaches a baffle **40** attached to a cap and positioned above an exhalation port.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to add the baffle of Cappa in the device of Kettl in order to prevent air from penetrating the upper portions of the mask (col. 7, lines 36-43).

- 16. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kettl et al. and in further view of US, 3,910,269 to Ansite et al.
- 17. **As to claim 15**, Kettl teaches all the limitations of the claim except for a mask further comprising plural catches joined to the flexible cap and mounted substantially perpendicular to an external face of the flexible cap.

Ansite teaches a mask having plural catches **53** joined to a flexible cap and mounted substantially perpendicular to an external face of the flexible cap.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the mask of Ansite with the microphone capsule of Kettl because Kettl discloses that the microphone capsule is capable of mounting to any respiratory mask (col. 4, lines 36-37), including that of Ansite.

Art Unit: 3761

18. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kettl in view of US 4,718,415 to Bolnberger et al.

19. **As to claim 18**, Kettl is silent with regards to a mouth-piece having a larger opening at the distal end than an opening facing the microphone capsule.

Bolnberger teaches a mask comprising a mouthpiece **9,14** (as seen in Fig. 8) for holding a microphone having an opening facing the user's mouth that is larger than the opening facing the microphone.

Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to design the mouthpiece of Kettl to that of Bolnberger because it better directs the sound waves coming from the user's mouth towards the microphone.

#### Conclusion

20. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3761

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Darwin P. Erezo whose telephone number is (703) 605-

0420. The examiner can normally be reached on M-F (8:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Aaron Lewis can be reached on (703) 308-0716. The fax phone numbers

for the organization where this application or proceeding is assigned are (703) 872-9302

for regular communications and (703) 872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

0858.
